

$$\ddot{y} + 4\dot{y} + 20y = r$$

-2

$$\mathcal{L} \Rightarrow s^2 Y(s) + 4s Y(s) + 20Y(s) = R(s)$$

$$\Rightarrow \frac{Y(s)}{R(s)} = \frac{1}{s^2 + 4s + 20} \Rightarrow Y(s) = \frac{4}{s} \times \frac{1}{s^2 + 4s + 20}$$

$$\begin{cases} 2g\omega_n = 4 \Rightarrow g\sqrt{20} = 2 \Rightarrow g = \frac{2}{\sqrt{20}} = \frac{1}{\sqrt{5}} \\ \omega_n^2 = 20 \Rightarrow \omega_n = \pm\sqrt{20} \end{cases}, g = \frac{1}{\sqrt{5}}, \omega_n = \sqrt{20}$$

$$0 < g < 1$$

$$t_p = \frac{\pi}{\omega_n \sqrt{1-g^2}} = \frac{\pi}{\sqrt{20} \sqrt{\frac{4}{5}}} = \frac{\pi}{4}$$

لحل حالة؟ مدار خفيف

$$s_1 = -\sqrt{3} + 3j, s_2 = -\sqrt{3} - 3j$$

-3

$$t_p = \frac{\pi}{\omega_n \sqrt{1-g^2}} = \frac{\pi}{|\text{Im}(s_1)|} = \frac{\pi}{|3j|} = \frac{\pi}{3}$$

$$t_s \rightarrow 2\% \rightarrow \frac{4}{g\omega_n} = \frac{4}{\text{Re}(s_1)} = \frac{4}{|-\sqrt{3}|} = \frac{4}{\sqrt{3}}$$

$$G(s) = \frac{2(s+3)}{(s+1)(s+2)}, R(s) = \frac{1}{s(s+1)}$$

-7

$$\Rightarrow Y(s) = \frac{1}{s(s+1)} \times \frac{2(s+3)}{(s+1)(s+2)} = 2 \left[\frac{s+3}{s(s+1)^2(s+2)} \right]$$

$$= 2 \left[\frac{A}{s} + \frac{Bs+D}{(s+1)^2} + \frac{C}{s+1} + \frac{E}{s+2} \right], A = \frac{3}{2} = \lim_{s \rightarrow 0} Y(s) \cdot s$$

$$C = -2, E = -\frac{1}{2}, B = 1, D = -1$$

$$= 2 \left[\frac{1.5}{s} + \frac{s-1}{(s+1)^2} + \frac{2}{s+1} + \frac{1}{2(s+2)} \right] \xrightarrow{\mathcal{L}^{-1}}$$

$$\mathcal{L}^{-1} \Rightarrow \boxed{3u(t) + \frac{d(te^{-t})}{dt} - te^{-t} - 2e^{-t} - \frac{1}{2}e^{-2t}} \\ y''(t)$$

$$\frac{C(s)}{R(s)} = \frac{\frac{7}{s^2 + as + b}}{1 + \frac{7}{s^2 + as + b}} = \frac{7}{s^2 + as + (b+7)}$$

$$\Rightarrow \begin{cases} 2g\omega_n = a \\ \omega_n^2 = b+7 \end{cases} \Rightarrow g = \frac{a}{2\sqrt{b+7}}$$

$$\frac{a}{2\sqrt{b+7}} \gg 1$$

برای اینکه توان کم باشد باید $g \gg 1$

حل برای $g=1$ حدانه میزنم رفته دارم، پس

$$\boxed{\frac{a}{2\sqrt{b+7}} = 1}$$

عزیزم

کمال حقیر
